CONTENTS

JANUARY

M. H. A. HASSAN and M. K. WALLIS — 1 — Stochastic diffusion in inverse square fields: general formulation for interplanetary gas

N. PAILER, E. GRÜN, D. BAHR and D. LANG — 11 — Laboratory simulation of cometary dust collection and analysis

S.-I. AKASOFU — 25 — A comprehensive view of solar–terrestrial relationships in terms of a chain of four dynamo-powered plasma acceleration processes

W. SWIDER — 49 — Thermospheric neutral composition from auroral ion ratios

D. P. SIPLER, M. A. BIONDI and R. G. ROBLE — 53 — F-region neutral winds and temperatures at equatorial latitudes: measured and predicted behaviour during geomagnetically quiet conditions

G. V. GROVES — 67 — Energy fluxes of the (1, 1, 1) atmospheric oscillation

S. W. H. COWLEY and W. J. HUGHES — 73 — Observation of an IMF sector effect in the Y magnetic field component at geostationary orbit

YU. V. KONIKOV and G. V. KHAZANOV — 91 — Equations of anisotropic hydrodynamics for electron component of the ionospheric plasma

J. M. GREBOWSKY, H. A. TAYLOR, JR. and J. M. LINDSAY — 99 — Location and source of ionospheric high latitude troughs

P. ELLIS and D. J. SOUTHWOOD — 107 — Reflection of Alfvén waves by non-uniform ionospheres

D. HUBERT — 119 — Auroral ion velocity distribution function: generalized polynomial solution of Boltzmann's equation

E. R. PEKÜNLÜ — 129 — Influence of interplanetary magnetic field sector boundary passages on Jovian decametric radio bursts

S. SOLOMON — 135 — The possible effects of translationally excited nitrogen atoms on lower thermospheric odd nitrogen

BOOK REVIEW — 141

FEBRUARY

M. LESTER and D. ORR — 143 — Correlations between ground observations of Pi 2 geomagnetic pulsations and satellite plasma density observations

J. S. MURPHREE, S. ISMAIL, L. L. COGGER, D. D. WALLIS, G. G. SHEPHERD, R. LINK and D. M. KLUMPAR — 161 — Characteristics of optical emissions and particle precipitation in polar cap arcs

B. HULTQVIST — 173 — On the origin of the hot ions in the disturbed dayside magnetosphere

H. BÖHRINGER, D. W. FAHEY, F. C. FEHSENFELD and E. E. FERGUSON — 185 — The role of ion–molecule reactions in the conversion of N_2O_5 to HNO_3 in the stratosphere

S.-I. AKASOFU and M. ROEDERER — 193 — Polar cap arcs and the open regions

K. BECKER, W. VAN WIJNGAARDEN and J. W. MCCONKEY — 197 — Dissociative excitation of SO_2 by controlled electron impact

G. MARKLUND, W. BAUMJOHANN and I. SANDAHL — 207 — Rocket and ground-based study of an auroral breakup event

S. P. HERNANDEZ, J. P. DOERING, V. J. ABREU and G. A. VICTOR — 221 — Comparison of absolute photoelectron fluxes measured on AE–C and AE–E with theoretical fluxes and predicted and measured N_2 2PG 3371Å volume emission rates

S. W. H. COWLEY and P. SHULL, JR. — 235 — Current sheet acceleration of ions in the geomagnetic tail and the properties of ion bursts observed at the lunar distance

J. L. PARISH and W. J. RAITT — 247 — Energy and momentum flow in electromagnetic fields and plasma

O. RØYRVIK — 253 — Midlatitude sporadic–E layers and vertical metallic ion drift profiles

ERRATUM — 265

MARCH

A. A. ARYKOV and YU. P. MALTSEV — 267 — Generation of Alfvén waves in an anomalous resistivity region

R. GODARD and J. G. LAFRAMBOISE — 275 — Total current to cylindrical collectors in collisionless plasma flow

K. S. HWANG, E. G. FONTHEIM and R. S. B. ONG — 285 — Excitation of an electrostatic wave by a cold electron current sheet of finite thickness

J. V. OLSON and L. C. LEE — 295 — PC1 wave generation by sudden impulses

V. J. ABREU, G. A. SCHMITT, P. B. HAYS J. W. MERIWETHER, Jr., C. A. TEPLEY and L. L. COGGER — 303 — Atmospheric scattering effects on ground-based measurements of thermospheric winds

U. N. DAS and A. C. DAS — 311 — Generation of ionospheric irregularities by thermal-source: a new mechanism

P. W. ERDMAN and E. C. ZIPF — 317 — Electron-impact excitation of the Cameron system ($a\,^3\pi \rightarrow X\,^1\Sigma$) of CO

W. ALLAN — 323 — Quarter-wave ULF pulsations

A. MOLINA — 331 — Visible continuum emission and gravity waves

K. YOSHINO, D. E. FREEMAN, J. R. ESMOND and W. H. PARKINSON — 339 — High resolution absorption cross section measurements and band oscillator strengths of the (1,0)–(12,0) Schumann–Runge bands of O_2

E. H. CARMAN — 335 — Equatorial depletions in the 630.0 nm airglow at Vanimo

APRIL

F. PRIMDAHL and F. SPANGSLEV — 363 — Does IMF B_y induce the cusp field-aligned currents?

V. W. J. H. KIRCHHOFF and B. R. CLEMESHA — 369 — The dissipation of a sodium cloud

J. BUITRAGO, R. GÓMEZ and F. SÁNCHEZ — 373 — The integral equation approach to the study of interplanetary dust

G. C. SETHIA, G. J. BAILEY, R. J. MOFFETT and J. K. HARGREAVES — 377 — The effects of neutral air winds on the electron content of the mid-latitude ionosphere and protonosphere in summer

G. J. BAILEY — 389 — The effect of a meridional $\mathbf{E} \times \mathbf{B}$ drift on the thermal plasma at $L = 1.4$

T. ONDOH, Y. NAKAMURA, S. WATANABE, K. AIKYO and T. MURAKAMI — 411 — Plasmaspheric hiss observed in the topside ionosphere at mid- and low-latitudes

VOL. 31 198

S. R. GOGAWALE and A. D. TILLU 423 Intensity variations and ratios of (9–4) and (7–3) hydroxyl bands in nightglow at Poona

J. C. SAMSON and G. ROSTOKER 435 Polarization characteristics of Pi 2 pulsations and implications for their source mechanisms: influence of the westward travelling surge

K. YUMOTO, T. SAITO and T. SAKURAI 459 Local time asymmetry in the characteristics of Pc5 magnetic pulsations

T. NAMIKAWA, H. HAMABATA and Y. HOSOYA 473 Propagation properties of hydromagnetic waves in a hot plasma and right-hand polarized PC1 and PC5

SHORT PAPER

H. BÖHRINGER, M. DURUP-FERGUSON, E. E. FERGUSON and D. W. FAHEY 483 Collisional vibrational quenching of $O_2^+(v)$ and other molecular ions in planetary atmospheres

MAY

M. CANDIDI, H. W. KROEHL and C.-I. MENG 489 Intensity distribution of dayside polar soft electron precipitation and the IMF

C. S. WU, D. DILLENBURG, L. F. ZIEBELL and H. P. FREUND 499 Excitation of whistler waves by reflected auroral electrons

D. G. KING-HELE and D. M. C. WALKER 509 Upper-atmosphere zonal winds from satellite orbit analysis

C. R. FRANCIS, H. J. STRANGEWAYS and K. BULLOUGH 537 Discrete VLF emissions (7–9 kHz) displaying unusual banded and periodic structure

C. A. GREEN, T. J. ODERA and W. F. STUART 559 The relationship between the strength of the IMF and the frequency of magnetic pulsations on the ground and in the solar wind

F. W. MENK, K. D. COLE and J. C. DEVLIN 569 Associated geomagnetic and ionospheric variations

J. A. WALDOCK, T. B. JONES, E. NIELSEN and D. J. SOUTHWOOD 573 First results of micropulsation activity observed by SABRE

D. HAYWARD and J. W. DUNGEY 579 An Alfvén wave approach to auroral field-aligned currents

REVIEW 587

ERRATUM and CORRECTION 589

SUBJECT INDEX

AIRGLOW

continuum emission and gravity waves, 331

hydroxyl nightglow,
intensity variations of (9, 4) and (7, 3) bands, 423
rotational temperatures from (8, 3) band, 923

interferometric measurements yield thermospheric winds, 303
interpretation of dayglow spectra through the 3371Å filter photometer on AE, 1223
nitrogen, N_2 3371Å emission rates and photoelectron fluxes from AE, 221
oxygen, 6300Å equatorial intensity depletions, 355
UV, atmospheric composition and temperature, 967

ALFVÉN WAVES

associated interpretation with auroral field-aligned currents, 579
generation in an anomalous resistivity region, 267
reflection by non-uniform isonosphere, 107
see also MAGNETOHYDRODYNAMICS

ATMOSPHERE TERRESTRIAL

aeronomic implications of translationally excited nitrogen atoms in thermosphere, 135
air density variations from satellite orbit analysis, 1501

composition,
chemical budget in stratosphere, 1009
conversion of N_2O_5 to HNO_3, role of ion molecule reactions in stratosphere, 185
from UV airglow observations, 967
influence of biology, 1065
influence of peroxyacetyl nitrate on odd nitrogen, 1075
mean molecular weight, thermospheric conservation equation, 1209
negative ions and sulphuric acid in stratosphere, 1459
neutral composition from thermospheric auroral ion ratios, 49
ozone budget in stratosphere, 1033
trace constituents, from troposphere-stratosphere radiation field study, 1517

gravitational potential, collocations and thirtieth order resonant harmonics, 829

gravity waves,
interpretation of visible continuum data, 331
mean flow interaction with dynamical model for middle atmosphere, 1465

models, see MODELS

motions,
circulation in high latitude thermosphere, 1479
oscillation of the (1,1,1) type, associated energy fluxes, 67
tides, semidiurnal, associated thermospheric energy flux, 1183
transport of ions in mid-latitude F1-region, 671
winds, see WINDS

negative ion profile in stratosphere, 813
O_2 absorption cross-section measurements and S-R band oscillator strengths, 339
photoelectron fluxes in thermosphere from AE observations, 221
seeding, see SEEDING
solar-terrestrial relationships, a comprehensive view, 25
SO_2 dissociative excitation by controlled electron impact, 197

temperatures,
auroral rotational intensity distributions, 1137
F-region, interferometric measurements and

predicted behaviour, 53
mean global value from solar flux measurements, 597
rotational, from hydroxyl nightglow measurements, 923
structure in thermosphere, 1479
UV airglow interpretation, 967

AURORA

annual and secular variations, Wilson Bentley's observations, 1131
beam-plasma interaction observed directly, 875
break up event, rocket and ground based study, 207
dayside, effects of IMF and magnetospheric substorm variations, 1345
electron reflections as source of whistler excitation, 499
evidence for emission of the N_2 Gaydon-Herman system, 1525
ion ratios yield thermospheric neutral composition, 49
ion velocity distribution function; solution of Boltzmann's equation, 119
mantle, in midday sector, and electron precipitation, 889

polar cap arcs,
characteristics of emissions and particle precipitation, 161
open regions, 193

radio absorption and westward travelling surge, 1373
rotational intensity distributions, thermospheric temperatures, 1137

BARIUM

space charge injection in ionosphere, dynamics of behaviour, 849

BIOGEOCHEMISTRY

atmospheric composition, 1065
influence of peroxyacetyl nitrate on odd nitrogen in troposphere and stratosphere, 1075

BOOK REVIEWS

Astronomy and Astrophysics for the 1980's (D. Williams), 1235
Astronomy and Astrophysics, Sub-vol. a: Methods, Constants, Solar System (A.H. Gabriel), 141
Chinese Astronomy and Astrophysics (W.B. Somerville), 589
Solar Magnetohydrodynamics (D.J. Southwood), 1379

dust collection and analysis, laboratory simulation, 11
packing effect in fluffy particles, 655

COSMIC RAYS

Modulation of galactic anisotropy in heliomagnetosphere, 1259, 1269

CURRENT SYSTEMS

current sheet, see MAGNETOSPHERE
directional currents in nocturnal E-region layers, 1177
electrojets, influence on polarisation characteristics of Pi2 pulsations, 435
estimates from geomagnetic data, a cautionary note, 1199
field-aligned, auroral, an Alfvén wave approach, 579
ring current energy injection rate, 901
total current to cylindrical collectors in collisionless plasma flow, 275

DYNAMICAL PROCESSES

diffusion and orbital perturbation of interplanetary gas particles by stochastic impulses,
dynamo-powered plasma acceleration processes, a comprehensive view, 25
hydrodynamic, anisotropic, electron component of ionospheric plasma, 91
large scale, atmospheric, see ATMOSPHERE, TERRESTRIAL, motions

ELECTROSTATIC POTENTIALS

mapped by incoherent scatter from ionosphere to magnetosphere, 1329

ELECTROSTATIC WAVES

excitation in cold current sheet of finite thickness, 285

GEOMAGNETIC FIELD

absorption events in auroral regions related to substorms, 1415
horizontal disturbances as related to electrical characteristics of auroral ionosphere, 641
non-recurrent disturbances from high speed solar wind streaming, 865
perturbations in intensity near magnetopause boundary layer, 1237
pulsations, see MAGNETOHYDRODYAMICS

GRAVITATIONAL POTENTIAL

collocations and thirtieth order resonant harmonics, 829

GRAVITY WAVES

see ATMOSPHERE, TERRESTRIAL

VOL. 31 1983

INCOHERENT SCATTER

mapping of electrostatic potentials from ionosphere to magnetosphere, 1329

INTERFEROMETRY

F-region neutral winds and temperatures, measured and predicted, 53
thermospheric winds from airglow measurements, effects of scattered contamination, 303

INTERPLANETARY MAGNETIC FIELD

Bx and By polarity effects on electron precipitation in dayside polar region, 489
By component, inducement of cusp field-aligned currents, 363
effects on dayside aurora, 1345
relationship to magnetic pulsations on ground and in solar wind, 559
sector boundary influence on passage of Jovian radio bursts, 129
sector effect in the Y component at geostationary orbit, 73
shock event of 1979, bidirectional distribution of energetic protons, 1388

INTERPLANETARY MEDIUM

cometary dust collection and analysis, laboratory simulation, 11
dust, spatial distribution from zodiacal light brightness integrals, 373
gas particle diffusion and orbital perturbation from stochastic impulses, 1
heating by solar wind, 1157
large-scale disturbance, observations from effects on Earth, 1171
packing effect of fluffy particles, 655
zodiacal cloud profile out of ecliptic, 871

IONOSPHERE

auroral, electrical characteristics related to horizontal magnetic disturbances, 641
electron content, effects of natural winds in Summer mid-latitudes, 377
electron plasma component, equations for anisotropic hydrodynamics, 91
electrostatic potentials, mapped from ionosphere to magnetosphere, 1329
E-region, directional currents, 1177
F-region neutral winds and temperatures, measurements and predictions, 53
F-1 region, ion transport, 671
irregularities, generation by thermal source; a new mechanism, 311
sporadic-E layers and vertical metallic ion drift profiles, 253
sporadic-E, observations using a pencil beam high frequency radar, 1397
topside, plasmaspheric hiss, 389
travelling ionospheric disturbances in F-region, conjugate effects, 1409
troughs, high latitude location and source, 99
variations associated with geomagnetic pulsations, 569
westward travelling surge, auroral radio absorption, 1373

IONS

metallic, vertical drift profiles and sporadic-E layers, 253
stratospheric, negative, composition and height profile, 813, 1459
transport in mid-latitude Fl-region, 671

JUPITER

atmospheric superrotation, 1339
decametric radio bursts, passage through IMF sector boundary, 129
dynamo region and equatorial electrojet, 633

MAGNETOHYDRODYNAMICS

Alfvén waves,
generation in anomalous resistivity region, 267
reflection by non-uniform ionospheres, 107

electron bunch adiabatic motion in magnetosphere, 659
ELF hiss, plasmaspheric, observed in topside ionosphere, 389
hydromagnetic vortices, 1099, 1117
Kelvin-Helmholtz instability, effect of oblique disturbances at boundary layers, 821
magnetosheath 'lion roars', stability analysis, 1165
'pearls', evolution in Earths magnetosphere, 859
pitch angle scattering of energetic protons, precipitation into ionosphere, 1147

pulsations,
Pc1, evolution in magnetosphere, 859
Pc1, generation by sudden impulses, 295
Pc1, right-hand polarized, propagation properties in hot plasma, 473, 931
Pc5, first results from SABRE, 573
Pc5, associated with ring current proton drifts: STARE radar results, 1279
Pc5, long time asymmetry characteristics, 459
Pc5, right-hand polarized, propagation properties in hot plasma, 473, 931
Pi2, correlation with plasma density observations, 143
Pi2, polarisation characteristics and implications for source mechanism, 435
quarter wave ULF, 323
relationship to strength of IMF, ground based and solar wind results, 559

variations associated with ionsophere, 569

thermal plasma, effect of meridional E x B drift, 411
VLF emissions with banded and periodic structure, 537
VLF emissions, propagation characteristics from cross-spectral phase information, 1083
whistlers, electron cyclotron waves from auroral reflections, 499

MAGNETOSPHERE

bow shock, acceleration processes of ambient protons, 689
bow shock, structure from laboratory and satellite results, 615
current sheet, acceleration of ions in geomagnetic tail and ion bursts at lunar distances, 235
current sheet, excitation of electrostatic wave, 285
dayside, disturbed, origin of hot ions, 173
diffusion of a multi-component plasma, 591
energy and momentum flow from solar wind, 247
magnetopause boundary layer, perturbations in magnetic field, 1237
magnetotail length from magnetospheric convection study, 885
plasma acceleration processes, a view of solar-terrestrial relations, 25
substorm variations, effects on dayside aurora, 1345

MARS

CO Cameron band spectra, new laboratory measurements, 317

MODELS

chemical budget of the stratosphere, 1009
heliospheric, Q-value and resistance of resonator, 701
middle atmosphere zonal-averaged dynamical, gravity wave mean flow interaction, 1465
ozone budget in stratosphere, one-dimensional photochemical model, 1033
plasmaspheric density distributions for diffusive equilibrium conditions, 1315
solar wind-magnetosphere coupling, perturbations in magnetic field, 1237
spherical, of troposphere-stratosphere radiation field at twilight, 1517

thermospheric,
global time-dependent, 1209, 1299
high latitude circulation and temperature structure, 1479
semi-empirical, a point of view, 945

NITROGEN

influence of peroxyacetyl nitrate on odd nitrogen in troposphere and stratosphere, 1075
metastable, resonant electron scattering, 843
NI (^4S-^4P) resonant multiplet, linewidth studies, 1291
translationally excited atoms, aeronomic implications in thermosphere, 135

OZONE

chemical budget in stratosphere, one dimensional photochemical model, 1033
description of campaign for intercomparison of groundbased and balloon results, 701, 811
ground based high resolution IR spectra, comparison with Dobson measurements, 723
ground based microwave measurements, 737
in-situ gas phase chemiluminescent ozoneometer, 743
lidar measurements of vertical distribution, 717
rocket optical ozonesonde results, 749, 761
satellite, NIMBUS, total ozone mapping spectrometer, 773
satellite, NOAA6, total ozone IR measurements, 779
scanning filter photometer for total ozone, compared with Dobson results, 735
stratospheric measurements by solar UV absorption, 767
total ozone measurements from a variety of instruments, 789
total ozone, implications of new cross-section measurements for O_3 in 310-350nm range, 1229
trace species measured above Haute-Provence observatory, 731
Umkehr method, 729
vertical distribution, techniques and results, 729, 791, 801, 809, 1053

PHOTOELECTRONS

flux measurements and predictions for AE, with N_2 3371Å emission rates, 221

PLASMA

depletions, ionospheric troughs, location and source, 99
effects of a meridional E x B drift on thermal plasma at L = 1.4, 411
electron component, equations of anisotropic hydrodynamics, 91
energy and momentum flow between solar wind and magnetosphere, 247
interaction with auroral electron beam, 875
multi-component, diffusion, 591
satellite observations, correlations with

VOL. 31 1983

Pi2 geomagnetic pulsations, 143

PLASMASPHERE

density distributions predicted for diffusive equilibrium conditions, 1315
observations of ELF hiss in topside ionosphere, 389

PRECIPITATION

auroral absorption substorm events, 1415
electrons, and the mantle aurora in the midday sector, 889
electrons, in dayside polar region, effect of IMF on distribution, 489
ion bursts at lunar distance, and current sheet acceleration, 235
photoelectron fluxes on AE, measured and predicted, 221
protons, bidirectional distribution and interplanetary shock event, 1388
protons, into nightside ionosphere, scattering in current sheet, 1147

PROTONOSPHERE

electron content, effects of neutral winds, 377

PULSATIONS

see MAGNETOHYDRODYNAMICS

RADIO EMISSIONS

see MAGNETOHYDRODYNAMICS

REACTION KINETICS

absorption cross-sections and band oscillator strengths for (1, 0) - (12, 0) SR bands of O_2, 339
absorption cross-sections for O_3 in 310-350nm spectral range, 1229
association rate coefficients of NO^+, O_2^+, N^+ and N_2^+ ions with N_2 and CO_2, 933
collisional vibrational quenching of O_2^+ (V) and other molecular ions in planetary atmospheres, 483
dissociative excitation of SO_2 by controlled electron impact, 197
dissociative recombination of electrons of NO^+ ions, 667
electron impact excitation of the Cameron system of CO, 317
Frank-Condon factors for H^2O^+ molecular bands, 1371
ion-molecule reactions in conversion of N_2O_5 to HNO_3 in stratosphere, 185
ionosphere O_2^+ reaction with NO, laboratory measurements, 1181
photodissociation effects of solar UV radiation, 987
resonant electron scattering by metastable nitrogen, 843

SATURN

atmospheric superrotation, 1339

SEEDING

dissipation of a sodium cloud in the atmosphere, 369
dynamics of artificial barium plasma clouds; movement pattern, 849

SODIUM

dissipation of increased concentration in atmosphere, 369

SOLAR WIND

disturbances caused by solar flares, 1435
energy and momentum flow to magnetosphere, 247
effect of oblique disturbances on Kelvin-Helmboltz instability, 821
heating of interplanetary medium, 1157
indices, 977
Q-value and resistance of the heliospheric resonator model for the 22 year solar cycle, 701
radiances, 977, 987, 1001

SPACECRAFT

bow shock structure, 615
cylindrical collectors of charge in collisionless plasma flows, 275
orbit analysis, air density variations, 1501
orbit analysis, zonal winds, 509

SPECTROSCOPY

Frank-Condon factors for H^2O^+ molecular bands, 1371
linewidth studies of NI(^4S-^4P) resonance multriplet, 1291

SPORADIC-E

see IONOSPHERE

TEMPERATURES

see ATMOSPHERE, TERRESTRIAL

URANUS

aurora, a Faraday disc dynamo mechanism, 1187

VENUS

lightnings and nitric oxide in atmosphere, 1363

WINDS

neutral, effects on electron content of

ionosphere and protonosphere, 377
neutral, F-region, measured and predicted behaviour, 53
thermospheric, contamination of interferometric measurements by scattering, 303
thermospheric, from DE satellite, comparison with model, 1299
zonal, from satellite orbit analysis, 509

ZODIACAL LIGHT

brightness integral along line of sight, 1381
cloud profile out of the ecliptic, 871
